To the Complexly team,

I want to be a science communicator, and to put it plainly, being a part of the SciShow team would be my dream job. I cannot imagine a better place for me to use my love of science and my desire to help others learn. I have always wanted to create a science YouTube channel of my own but being able to join the SciShow team would be even better.

I excel at explaining complicated science topics to ordinary people and am the type of person that people go to with everyday physics questions. I love breaking down complicated concepts like quantum mechanics and plasma physics into ideas that anyone can relate to, like music and colors. I don't generally consider myself a "smart" person, so I usually need to really sit with ideas and concepts to fully understand them, but I believe this leads me to be especially good at explaining things to others.

Science as a whole excites me, but more specifically plasma physics and high energy physics are what my background is in. I have had experience researching Particle Physics at CERN and Plasma Physics at Scarlet Laser Facility, both of which required extensive communication to people outside of my field. I would love to reach a broader audience writing and research about anything that SciShow may need. I will be graduating at the start of May from the Ohio State University and I would be very honored to join the Complexly team and become a writer for SciShow.

Sincerely,
Nashad
